Netweather.tv September Sea Ice Prediction (September Update)

- September Mean Sea Ice Extent Prediction: **3,900,000km^2**

- The prediction method was based on a poll of Netweather.tv forum members. The question was "*What do you think will the MEAN September sea ice extent be?"* The options and vote numbers were as follows:

Extent	Votes
4700000	0
4600000	0
4500000	0
4400000	0
4300000	0
4200000	3
4100000	1
4000000	3
3900000	4
3800000	1
3700000	3
3600000	1
3500000	1
3400000	0
3300000	1
3200000	0
3100000	0
3000000	0
2900000	0
2800000	0
2700000	0

  The mean (3,866,667) of the above votes was rounded to the closest 100,000 and used to form the prediction.

- Netweather.tv is one of the leading independent weather forecasting companies in the UK. Its community forum includes a climate and environment sub-section with discussion threads on various topics including Arctic sea ice. The prediction was made based on a poll of contributors and viewers of this sub-section.
