

UMEÅ UNIVERSITET

ARKTISKT CENTRUM - ARCUM

The Arctic Research Centre at Umeå University (Arcum) provides networking opportunities for over 325 affiliated researchers. Since our founding in 2012 we have found that one way to success is **cooperation with local communities**.

ARCTIC GOVERNANCE

The New Governance project arranged stakeholder meetings in eight different places, asked for suggestions for further initiatives, allocated 15 % of the budget for these endeavours, performed selected efforts and re-connected with stakeholders.

CITIZEN SCIENCE

Aiming to identify the fingerprints of environmental change in Abisko and their relation to climate change, citizens and visitors are engaged in collecting information on plant distribution, flora and weather conditions.

SAMI RESEARCH

Indigenous research has established a concept of working together with reindeer herders that initiates a collaboration at an early stage, where questions, relevance and outreach are important components for the success of the projects.
