## BUILDING THE NEXT GENERATION OF LEADERS

### Who are we?

Students on Ice (SOI) is internationally recognized as a pioneer and leader in experiential education, having led over 30 ship-based expeditions for youth aged 14 to 24 in the last 20 years. SOI provides a unique environment filled with inspiring peers, world-class educators and an incredibly unique classroom setting where participants thrive.

The students who are drawn to SOI's expeditions already show the makings of leaders, innovators, creators and change-makers in their home schools, communities and countries.

Together we create a transformative educational experience that changes the way the next generation of leaders perceive and act on sustainable development, healthy communities and environmental stewardship in the Arctic and beyond.

Take a look through the porthole to learn about our approach to experiential education!

**INTERDISCIPLINARY**

Interdisciplinarity is about studying a subject from multiple perspectives, and SOI expeditions include 80+ staff with diverse experiences and expertise to help youth do exactly that. For example, while a scientist might teach about the pathology of a disease and its impact, an Inuit elder might share more about the impact on local people's ability to hunt.

**INQUIRY-BASED & STUDENT-CENTRED**

SOI seeks to awaken and feed the natural curiosity of youth, inspires, empowers, and challenges them to learn, and aims to stimulate the understanding of participants with foundational, plus the tools to grow.

**PLACE-BASED & IMMERSIVE**

Place-based learning harnesses the power of a particular geographic area and the use of all senses. Authentic, and the use of place to teach, is rooted in the environment, culture, and history.
