

ARCTOS: Creating synergies for research, training, and dissemination to end-users at the cutting edge of Arctic marine ecosystem studies

/ WHAT IS ARCTOS?

ARCTOS is a research network combining the expertise of educational, governmental and private research institutions from northern Norway (●) and beyond (○) to achieve an integrated view of Arctic marine ecosystems.

Unique access to and possibilities for Arctic marine research infrastructure

UNIS University Centre in Svalbard

Important initiator of the Arctic Frontiers conferences:

RV "Kronprins Haakon"

Coupling research with decision makers from government and business and

Cross-disciplinary workshops for early career scientists

ARCTOS member students and post-docs receive training, funding and mentoring via our Student Support Network

Arctic Frontiers PhD workshop

ARCTOS Days

Polar night cruise with RV "Helmer Hanssen"

Find out more about ARCTOS:

<http://arctos.uit.no>

More than 17 years of support from the six member institutions, and dedication of network members, have made ARCTOS a provider of cutting-edge and relevant research, and help foster a new generation of high-level ecosystem scientists for science and society.
