Pan-Arctic Political Hierarchy

Administration Sub-Divisions

Level includes US Counties, Canadian Counties, Census Divisions, Regions, etc, Russian Raions

H³L Summary

Intersection of hydrology and humans

Interested to know current state of water resources across the pan-Arctic

Understand how to link local and macro scales

Extend analysis into the future

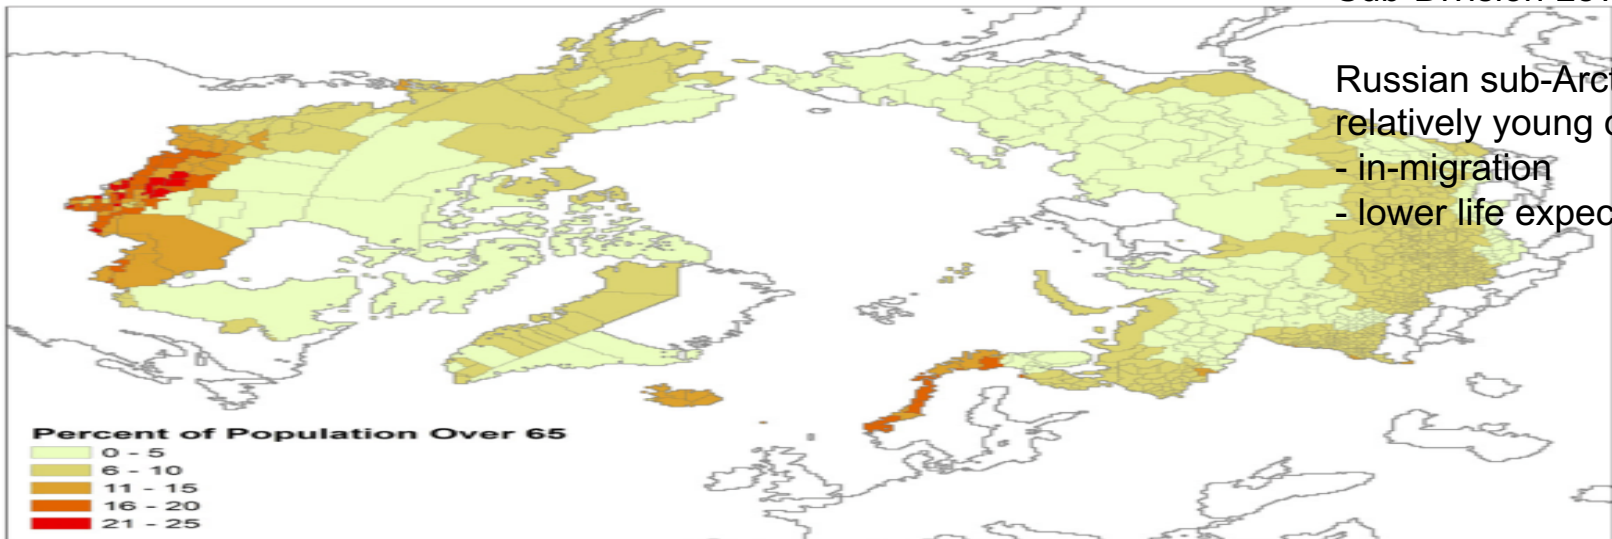

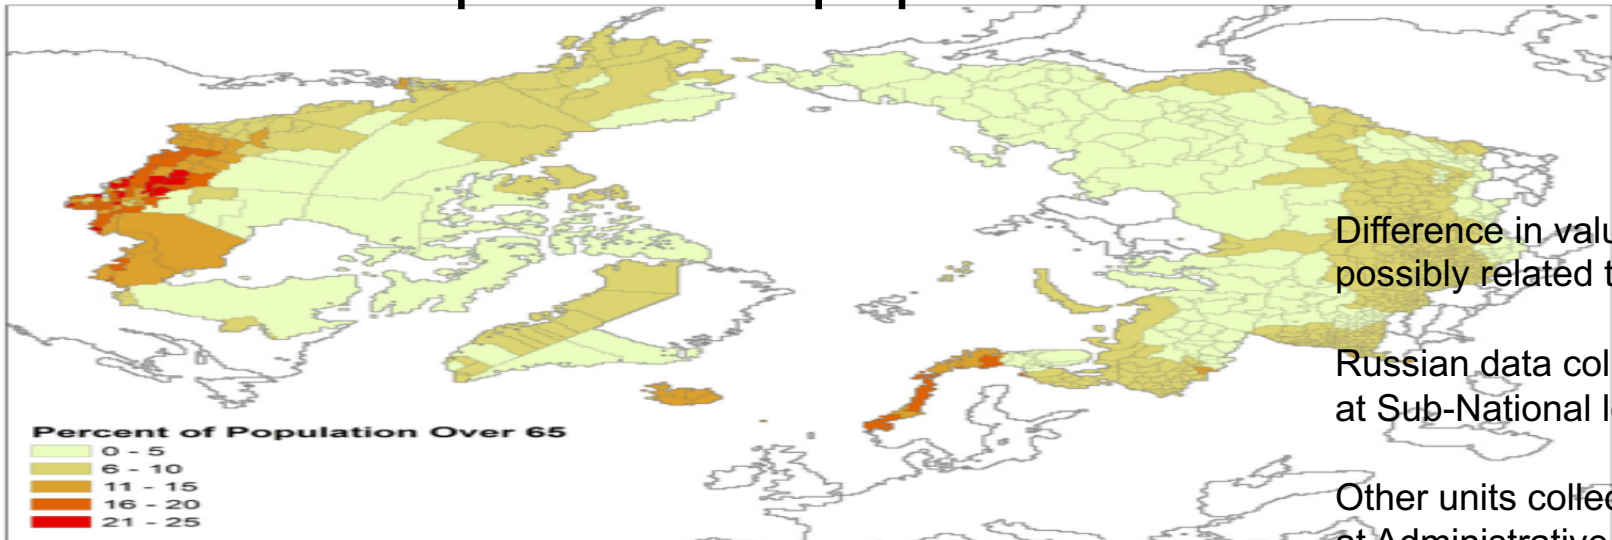

Identify vulnerable regions

Pan-Arctic Drainage

South to 45°N

Percent pan-Arctic population 65 and older

Calculating Water Use

Level I

Lumped values when data is limited

(Mongolia, China, Kazakhstan)

Level II

Resolve by economy type

(Russia, Scandinavia)

Level III

Resolve Commercial and Industrial water use

(Canada, Alaska)

CALCULATION OF KEY WATER INDICATORS

DIA_n = domestic, industrial, agricultural water use ($\text{km}^3 \text{ yr}^{-1}$) in cell n

$$\sum DIA_n = \text{DIA in cell } n \text{ plus all upstream cells } (\text{km}^3 \text{ yr}^{-1})$$

$$= \sum_{i=1}^n DIA_i$$

R_n = locally-generated runoff (mm/yr)

A_n = area of cell n (km^2)

$QL_n = 10^6 * R_n * A_n$ = locally generated discharge ($\text{km}^3 \text{ yr}^{-1}$)

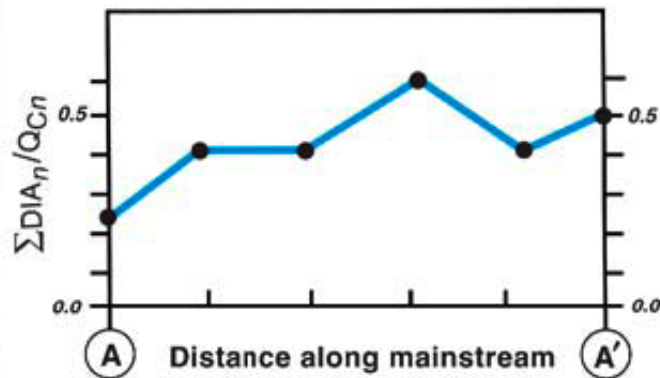

$$QC_n = \sum_{i=1}^n QL_i = \text{river corridor discharge } (\text{km}^3 \text{ yr}^{-1})$$

DIA_n/QC_n = local relative water use (unitless)

$\sum DIA_n/QC_n$ = water reuse index (unitless)

n = position of cell in river network = total number of upstream cells plus cell in question

Key (cell n)

Arctic Water Resources Vulnerability Index (AWRVI)

$$\mathbf{AWRVI} = \mathbf{AWRVI}_{\text{physical}} + \mathbf{AWRVI}_{\text{social}}$$

Physical sub-index:

$$\mathbf{AWRVI}_{\text{physical}} = \mathbf{AWRVI}_{\text{natural_supply}} + \mathbf{AWRVI}_{\text{municipal_supply}} + \mathbf{AWRVI}_{\text{water_quality}} + \mathbf{AWRVI}_{\text{permafrost}} + \mathbf{AWRVI}_{\text{subsistence_habitat}}$$

Constituent sub-indices:

$\mathbf{AWRVI}_{\text{natural_supply}}$ = f (precipitation, surface water, river runoff) ←

$\mathbf{AWRVI}_{\text{municipal_supply}}$ = f (yield, source diversity, treatment technology, hydraulic gradient, permafrost risk) ←

$\mathbf{AWRVI}_{\text{water_quality}}$ = f (upstream modification, water quality testing) ←

$\mathbf{AWRVI}_{\text{permafrost}}$ = f (permafrost distribution) ←

$\mathbf{AWRVI}_{\text{subsistence_habitat}}$ = f (aquatic habitat, terrestrial habitat)

Opportunities to
downscale from
future climate
change scenarios
and macro-scale
georeferenced
data sets to assess
the resilience of
communities to
change.

Social sub-index:

$$\mathbf{AWRVI}_{\text{social}} = \mathbf{AWRVI}_{\text{knowledge}} + \mathbf{AWRVI}_{\text{economic}} + \mathbf{AWRVI}_{\text{information_capacity}} + \mathbf{AWRVI}_{\text{sensitivity}}$$

Constituent sub-indices:

$\mathbf{AWRVI}_{\text{knowledge}}$ = f (traditional knowledge, Western knowledge, residency time)

$\mathbf{AWRVI}_{\text{economic}}$ = f (community wealth) ←

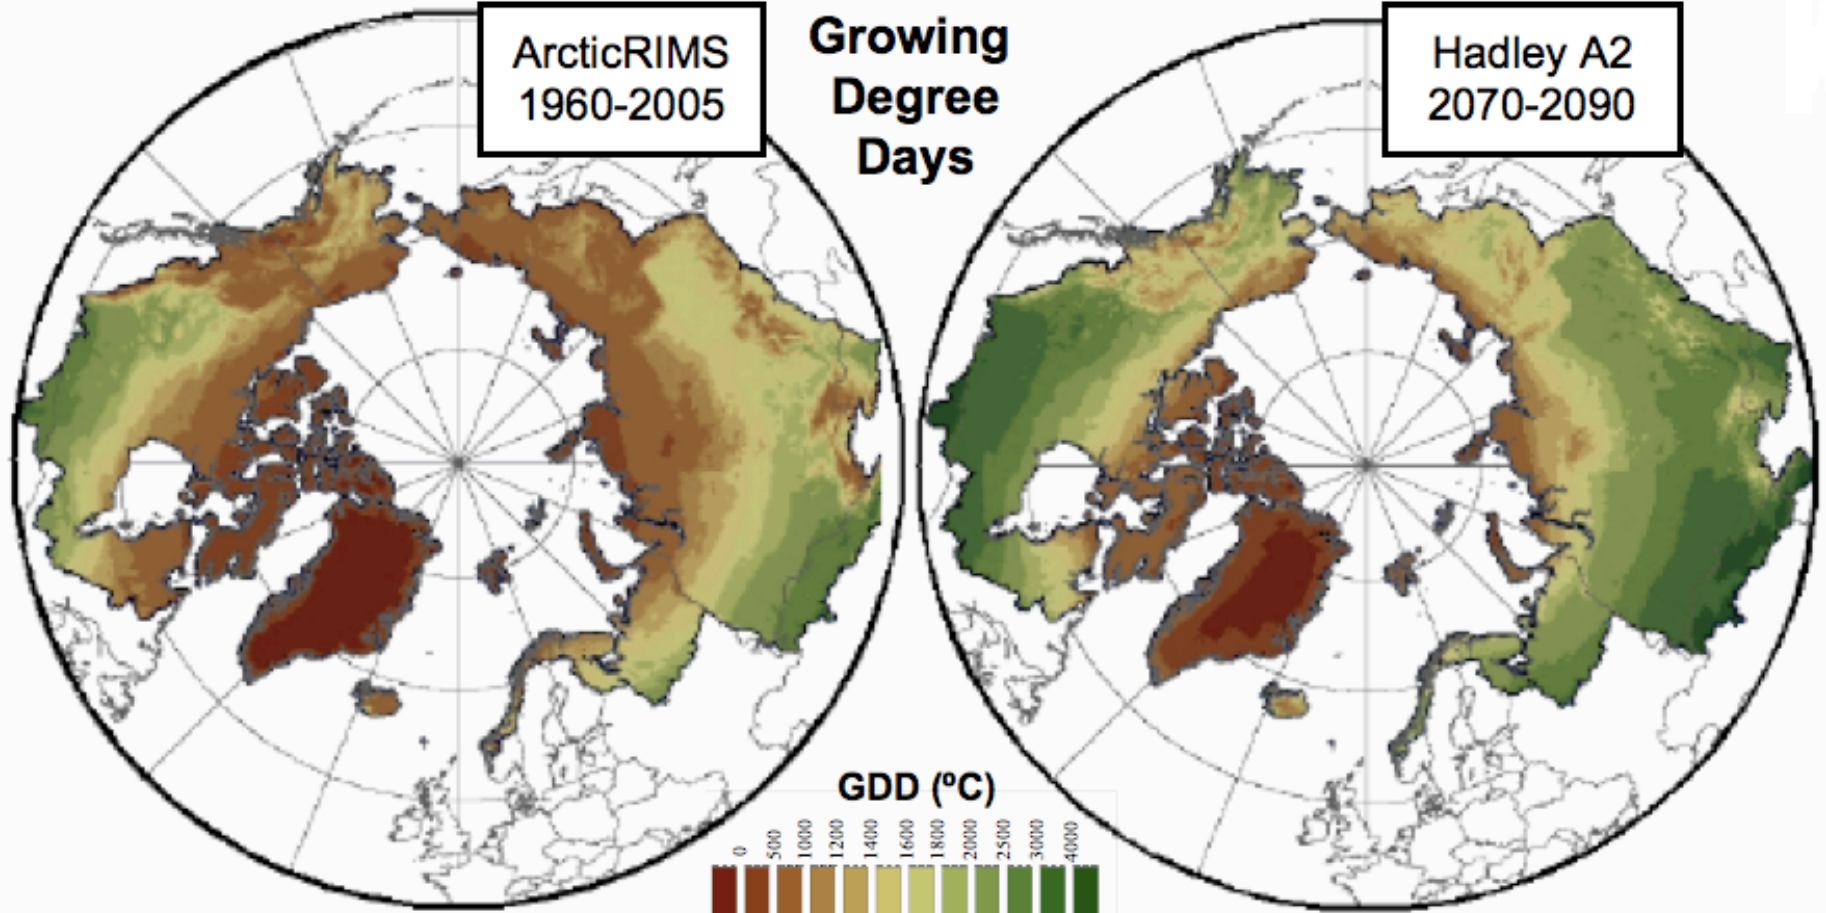

$\mathbf{AWRVI}_{\text{information_capacity}}$ = f (land tenure) ←

$\mathbf{AWRVI}_{\text{sensitivity_change}}$ = f (subsistence values, social network diversity, perception of change)
