

An aerial photograph of a vast, snow-covered landscape, likely the Arctic. The terrain is characterized by long, undulating dunes of snow, creating a rhythmic pattern of light and shadow. The sky is a pale, clear blue, and the overall scene conveys a sense of extreme cold and isolation.

# The White Arctic: A Snow Impacts Synthesis for the Terrestrial Arctic

# Challenge of Arctic Snow

# Focus

- As the arctic climate changes, in addition to changes in snow depth and water equivalent, *the mechanical, thermal, and optical properties of the snow cover will also change, and all of these changes (and their spatial-temporal distributions) will produce a complex set of interlinked ramifications best understood by undertaking a snow-centric analysis.*

# Questions

- How will snow changes impact Arctic winter albedo?
- In what way will climate change alter Arctic snow covers?
- How do changes in snow impact humans and wildlife?
- Will deeper snow packs melting earlier produce more or less storage of water in basins?

How do we get there from here?

# **SnowModel**: A Spatially Distributed Snow-Evolution Modeling System (Liston and Elder 2006a).

**MicroMet** – Micro-Meteorological Distribution Model (Liston and Elder 2006b)

**EnBal** – Surface Energy Balance/Melt Model (Liston et al. 1999)

**SnowPack** – 1-D, Single-Layer Snowpack Model (Liston and Hall 1995)

**SnowTran-3D** – Blowing and Drifting Snow Model (Liston and Sturm 1998; Liston et al. 2007)

**SnowAssim** – Snow Data Assimilation Model (Liston and Hiemstra 2007)

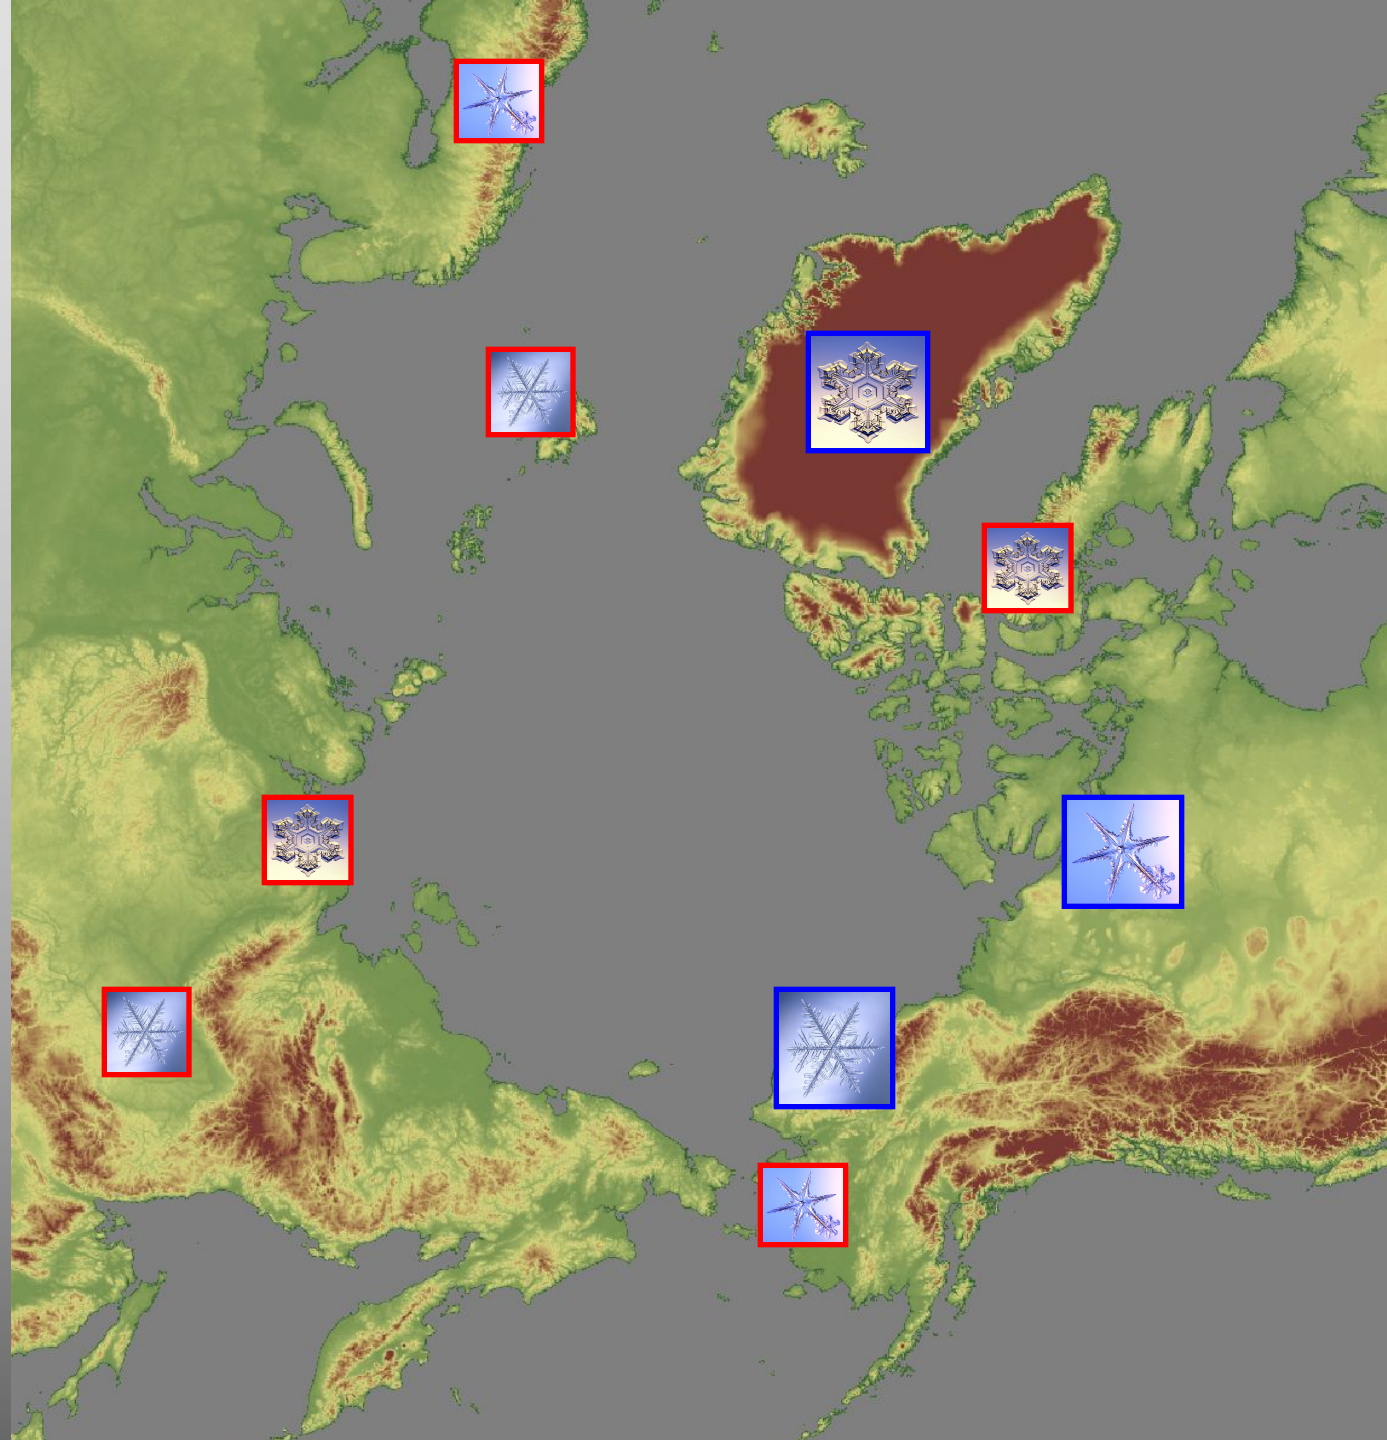

## **A Blowing Snow Model (SnowTran-3D)**

(Liston and Sturm (1998) *J. Glaciology*, 44, 498-516)

**Our collection of area-specific simulations will be used to guide Pan-Arctic model simulations.**

**The red boxes indicate previous simulation efforts; the blue boxes indicate current efforts.**

# Example Spatially Distributed Products

**Winter Optical Properties:** Landscape albedo, Protruding vegetation fraction, Dry and wet transition timing

**Snow Thermal Properties:** Snow depth and density, Soil temperature, Winter soil biological productivity index

**Snow Mechanical Properties:** Ice-crust formation, Blowing-snow event frequency, Snow trafficability index

**Hydrologic Characteristics:** SWE, Snowmelt timing, Snow-free season length, Meltwater partitioning
